

Sujin K Suresh

Flutter Developer | Full-Stack Mobile Engineer

sujinksureshofcl@gmail.com +91 8129921694 [LinkedIn](#) [GitHub](#)

Professional Summary

Flutter developer who **built and shipped two fintech products** as the sole developer at a startup: a **live family pocket-money app on Google Play** and a **multi-tenant school-savings SaaS**. Strong in **Flutter/Dart** (Clean Architecture, Riverpod, BLoC), with working experience in **FastAPI, PostgreSQL, and AWS**. Comfortable owning the full lifecycle: architecture, features, deployment, compliance, and release.

Technical Skills

Mobile: Flutter, Dart, Clean Architecture, MVVM, Riverpod, BLoC/Cubit, Provider, Android Kotlin

Backend: FastAPI (Python), REST APIs, PostgreSQL, Alembic, Redis, JWT auth

Cloud & DevOps: AWS (ECS Fargate, EC2, RDS, S3, CloudFront, CloudWatch, IAM), GitHub Actions CI/CD, nginx

Integrations: UPI QR flows, Razorpay, WhatsApp Business API, Firebase (FCM, Firestore), AWS Textract OCR, DLT SMS

Testing & Tools: Flutter unit/widget tests, pytest, Flutter DevTools, Git, Figma, VS Code

Fundamentals: OOP, Data Structures & Algorithms, SOLID, Design Patterns

Work Experience

Flutter Developer (Full Stack)

Jan 2026 – Oct 2026

FinslVerse Private Limited

Kozhikode, India

Finsl Family App ([Google Play](#)) — UPI-based pocket money, chores, and rewards for families. Sole developer across Flutter, FastAPI, and AWS.

- Built the full Flutter app: OTP parent auth, child onboarding, chore management, XP/level progression, and parent/child dashboards. Shipped to Google Play in July 2026.
- Designed a UPI scan-and-pay flow (child scans merchant QR, parent approves in their own UPI app) with static vs. dynamic QR handling, after NPCI/GPay restrictions blocked the direct intent approach.
- Wrote a Kotlin `NotificationListenerService` that detects UPI gift-payment notifications from GPay and PhonePe.
- Deployed the backend on AWS (FastAPI on ECS Fargate, RDS PostgreSQL, ElastiCache Redis, S3, CloudWatch); restored the stack from RDS snapshots with no data loss.
- Completed DLT SMS registration (Sender ID, Principal Entity ID, operator approvals) for OTP delivery.
- Fixed a Google Play review rejection by tracing a silent production failure in CloudWatch logs to a DB constraint; closed an exposed RDS security group and rotated credentials.
- Wrote 243 Flutter and 227 backend tests.

Finsl for Schools (school-os.finsl.co) — multi-tenant SaaS for weekly student savings, with parents paying via UPI. Sole developer; pilot-ready.

- Built a multi-tenant platform (FastAPI + Flutter Web with Riverpod and `go_router`) with tenant isolation and role-based access (admin, accountant, teacher, principal).
- Built a payment verification pipeline using AWS Textract OCR: extracts UTR, amount, and payee from UPI screenshots, applies validation rules (UTR format, amount cap, fuzzy name match, dedup), and auto-verifies payments.
- Integrated the WhatsApp Business API (Meta Cloud) with approved Utility templates and a timezone-aware weekly reminder job.
- Implemented forgot-password and admin-mediated reset flows with rate limiting and single-use JWT reset tokens.
- Deployed on AWS: EC2 with nginx and HTTPS for the API; S3 + CloudFront for the web app; GitHub Actions CI/CD with auto-migrations.
- Wrote 675 backend and 368 Flutter widget tests.

Projects

YeetFit — AI Fitness Tracker (Flutter)

[APK](#) [GitHub](#)

- Google/email auth and Razorpay subscription payments with entitlement gating; health tracking (food, steps, water, sleep, weight) on Firestore; AI fitness coach chat. Built with Clean Architecture and Riverpod.

Z Play — Offline Music Player (Flutter)

[APK](#) [GitHub](#)

- Local playback with just_audio, background play, and playlists/favorites persisted in Hive. Material 3 UI with custom player controls.

Education

B.Tech in Computer Science, Kerala Technological University
Providence College of Engineering, CGPA: 7.25

June 2020 – May 2024

Mobile Application Development using Flutter, Brototype

Nov 2024 – Sept 2025
[Certificate](#)
